

PRACTICAL 4

Program 1: Implement polyalphabetic cipher encryption-decryption.

Code:

```
def char_to_int(text):  
    l1 = []  
    l1.clear()  
    for char in text:  
        if char.isalpha():  
            if char.isupper():  
                l1.append(ord(char) - 65)  
            else:  
                l1.append(ord(char) - 97)  
    return l1  
  
def int_to_chat(number_list):  
    l1 = []  
    for integer in number_list:  
        l1.append(chr(integer + 97))  
    return l1  
  
def key_generate(text,key):  
    l1 = []  
    l2 = []  
    for i in key:  
        l2.append(i)  
    for i in range(len(text)):  
        j = i % len(l2)  
        l1.append(l2[j])  
  
    return "".join(l1)
```

```
